

# BOS-624 series

This is the ultimate tool! Fits pipe tips exactly! Stops fluid at any point along hose! Makes air bleeding a breeze, enormously useful in inspections and servicing.

While servicing is in progress, isn't there any way to keep oil from dripping onto the floor from disconnected brake pipes, and getting all over work clothes? Not only that, but bleeding air turns into a major project! Work would also go a lot better if fuel hoses and vacuum hoses could be clamped off partway along the hose ... Now all of these are possible, with the BOS-624 series of fluid stoppers! Single-touch installation, simple construction that doesn't come apart easily, and the work goes far better. Ideal for ABS vehicles.

- A) For spectacle joints --- Applicable for spectacles with inner joints of up to 16 (two per bag).
  - B) For flared nuts (external-threaded) --- Applicable for pipes with flared nuts of 4.76 and 6.35 (two per bag).
  - C) For hoses --- Applicable for hoses with outer diameters of up to 18, including vacuum hoses, fuel hoses, and brake hoses.
  - D) For pipes --- Applicable for pipes and vacuum hoses of 4.76, 6.35, and 8. (Five per bag)
- Full set covering all your needs --- This contains types A, B, C, and D.
