

# CBT-909 series

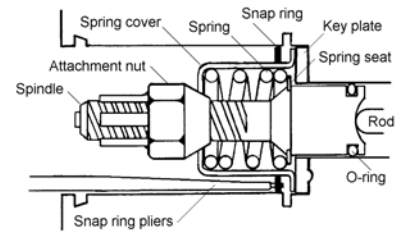

This series makes it so easy to work with all aspects of disc brakes that have parking brakes, from replacing the pads to overhauling the brakes, that no special expertise is needed.

Internal caliper disassembly is done using a special ultra-slim type of snap ring wire, while assembly is done with an attachment nut that presses on the spring cover, so that snap rings can be installed easily.

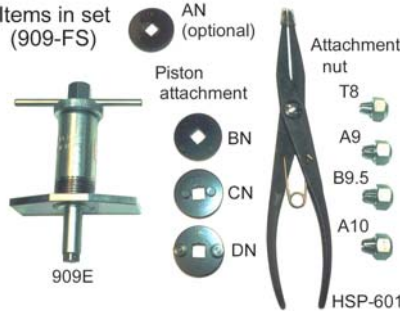

When pads are replaced, four types of piston attachments and piston removers (the AN used with earlier Nissan models is available as an option) are provided for turning and returning the piston when replacing the pad, and for removing pistons when overhauling the brakes.

- CBT-909E: Piston presser main unit
- CBT-909PS: Set of three piston attachments
- Set product code: CBT-909ES
- CBT-909NS: Set of four attachment nuts
- HSP-601: Snap ring pliers
- CBT-909FS: Full set with all of the above items
- CBT-909AN: Piston attachment for earlier Nissan Annette models (optional)

Items in set (909-FS)

Applicable caliper brake tools and CBT-NS attachment nuts

Maker	Vehicle name/model	Applicable nut
Toyota	Starlet/EP82	T8
	Tercel/Corsa/EL31	T8
