

BEARING GREASE CHANGER

GR-936 series

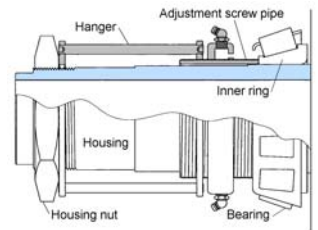

Now, wheel bearings on large-sized vehicles and trailers can be lubricated with grease at a single touch! Old grease can be extracted without removing the bearings, and when grease hardens under colder conditions, it can be replaced easily, without getting your hands dirty.

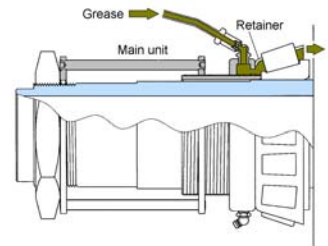

Old grease can be extracted directly into a plastic bag, so your hands stay completely clean.

How this product is used

* First, the tip of the adjustment screw pipe is brought in contact with the inner ring of the bearing, and is secured with the housing nut to keep grease from leaking to the housing side.

* The main unit is rotated to close the gap between the main unit and the retainer.

Outline of applicable products (product codes in the table indicate applicable bearing numbers)

Code	G50	G55	G60	G65	G75	G85	G90	G95	G100	G105
