

FRONT FORK OIL SEAL PUSHER (sideways suspension accommodated)

HHP-2646

This can be used either standing or on its side! A three-part attachment and a 2-part detachable hammer enable front fork oil seals with an inner tube outer diameter of 26 to 46 to be installed easily and accurately.

The attachment is made of nylon, and vinyl chloride is affixed to the inner surfaces of the hammer, so there is no need to worry about the inner tubes being scratched or damaged.

The 3-part attachment is adjusted so that the positions are uniform, and then the attachment is tapped with the detachable sliding hammer to punch the seal into place.
