

# PL-BN

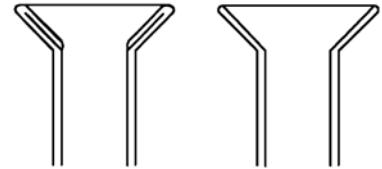

Double-flare processing: With this tool, pipe bending is faster and more accurate than ever before!

A pipe flare is the highest class of dedicated tool used for machining the end-surface flare of the brake pipe. Now, steel pipes can be machined simply by securing the pipe in a vise and forming a double-flare shape (same standards as the genuine article).

Double flare  
(PL-BN)  
Same  
machining as  
genuine article

Single flare  
(conventional  
commercial  
item)

Item	Applicable pipe diameter	Material
Pipe Flare PL-BN model	Universal models 4.76/6.35/8/9.5/ 10/12/12.7/15 mm	Steel/copper/ aluminum
